

Yomura Datacenters

YOMURA

Data Centers

Secure, redundant, certified and scalable. Built for Engineers. Trusted by Enterprises. Yomura offers high-performance infrastructure with transparent operations.

Atlanta | Chicago | Dallas | Los Angeles | New York | Seattle
Amsterdam | Dublin | Frankfurt | London | Milan | Stockholm

Why Yomura?

Yomura has become the colocation partner of choice for enterprise tech leaders seeking control, transparency, and rock-solid uptime.

Why Tech Leaders Choose Yomura:

- 12 Tier-3+ level data centers across the U.S. and EU
- Designed for compliance-first, high-availability deployments
- Carrier-neutral, cloud-onramp ready, and fully transparent pricing

You bring the systems. We provide the backbone.

Infrastructure

Our power, cooling, and network backbone is engineered for zero-interruption performance and high-throughput environments at scale.

Power and Cooling: Designed for Autonomy

- N+1 or better UPS and generator failover
- 48-hour diesel reserve capacity on-site
- Hot/cold aisle containment with CRAC/CRAH systems

Connectivity: Low Latency, High Bandwidth

- Tier-1 ISP access and dark fiber availability
- Cloud interconnects with AWS, Azure, GCP (where applicable)
- BGP session support for advanced network configs

Physical Security & Audit Readiness

Compliance and physical security are non-negotiable when sensitive data is involved. We've embedded best-in-class access controls and industry certifications into every site we operate.

Enterprise-Grade Security:

- Dual-authentication (card + biometric)
- 24/7 NOC and security monitoring
- Customizable cabinet and cage access logs

Audit Compliance:

- MPAA, HIPAA, SOX-ready environments
- Physical and logical access logs available
- Facility-level compliance documentation on request

Colocation Configurations

Yomura offer a range of deployment formats from a single rack to multi-rack cages – alongside hands-on operational support – designed to be an extension of your own team.

Choose What Fits:

- Half-cabinet (21U) or full cabinet (45U)
- Private cages from 3 to 20 racks

Remote Hands: Extension of Your Team

- Scheduled and emergency support
- Reboots, racking, cable management, diagnostics
- SLA-backed response times

Multi-Site Redundancy, Zero Downtime

Here's how Yomura can help you architect multi-location, fault-tolerant deployments that can handle outages, traffic spikes, or unexpected disruptions.

Geographically Distributed Deployments:

- Run redundant nodes in multiple metros
- Smart bundling across US-East, US-West, and EU zones
- Cross-site routing with interconnect options

Build failover. Test recovery. Maintain compliance – across borders.

Network & Integration Ecosystem

Today's infrastructure must be cloud-connected, carrier-flexible, and protocol-aware. In this section, we detail our rich networking environment and integration options – from BGP peering to cloud interconnects – all built for maximum control and minimum latency.

- Carrier Neutrality: Choose your own ISPs or use us
- Cloud Interconnects: Route directly to AWS, Azure, Google
- IPv6 & BGP Ready: Scalable solutions as you choose them
- Out-of-Band Management: Available across all sites

Pricing

Your infrastructure should be scalable, but your costs shouldn't spiral. That's why Yomura offers a straightforward pricing model, technical flexibility, and the engineering support that ensures you're building for efficiency from day one.

Base Pricing Starts At:

- \$1,500/month per 45 U cabinet – power metered separately
- Custom fixed-rate power plans and burstable options available
- Multi-rack and multi-site discounts available

Engineering Flexibility

Engineering Engagement Options:

- Work directly with our infrastructure architects
- Tailored deployment blueprints
- White-glove onboarding for complex rollouts

No nickel-and-diming. No vendor lock-in. Just transparent engineering collaboration.

CIOs, CTOs & Architects

If you're leading infrastructure strategy, this is your checklist. CIOs, CTOs, and architects continue to deploy their most critical systems with Yomura.

We Align With Your Priorities:

- Uptime-First Architecture – Redundancy in every system
- Compliance Support – Logs, docs, and locked doors
- Engineering-Focused Support – Work with techs, not ticket systems
- Customizable Infrastructure – Your systems can grow just-in-time
- Scalability Without Waste – Scale up without rebuilding every 6 months

Start the Conversation

Our team is ready to engage whenever you are. What it is precisely that you're looking for?

Let's Talk

We're not here to oversell. We're here to engineer the best colocation solution for your architecture. Whether you're migrating legacy systems or building multi-region fault-tolerant deployments, we're here for you.
